Chocolatey Setup & Deployment Service

Business challenge

Managing software on Windows can be challenging. Most Microsoft products are positioned as easy-to-use point-and-click systems. This is useful for getting work done simply via a GUI, but makes automating at scale time-consuming and challenging. Bespoke automation approaches across teams lead to gaps and decrease speed of delivery, and traditional tools for developing and managing Windows software come with overhead and complexity. These challenges make it difficult for Windows teams to adopt DevOps practices within their existing workflows.
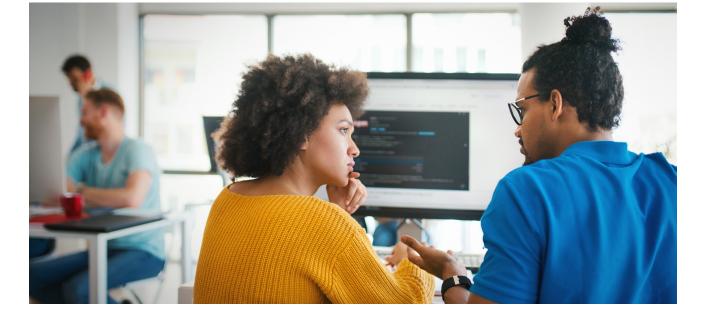

A Puppet professional can help enable fully automated deployment of Windows software by installing and configuring Chocolatey as a package manager.

Customer benefits

- Bridge skill and resource gaps, and see faster ROI with Puppet and Chocolatey expertise
- Expand automation to Windows software
- Increase the speed and reliability of deploying Windows software

Expected outcomes

- Installation and setup of Chocolatey
- Installation of repository manager
- Collaboration on building basic packages using the Chocolatey Package Builder

Who will benefit?

The Chocolatey Setup & Deployment service is designed for teams that:

- Struggle to efficiently deploy and make changes to Windows software
- Face disruptions and must make manual changes due to the complexity of their Windows systems
- Lack the resources or time required to automate the deployment of Windows software
- Are struggling to expand automation success to new teams

What you can expect

A Puppet professional with Chocolatey expertise will install and set up Chocolatey and collaborate with your team to build basic packages using the Chocolatey Package Builder. This will help automate and increase the speed of your Windows software deployments, and support the expansion of automation across your organization.

Assumptions

- All services will be delivered remotely unless otherwise agreed prior to the engagement.
- This is a one-week minimum engagement.
- The current environment is functional, with Puppet workflows in place.
- The customer has purchased Chocolatey for Business.
- The customer has access to install a repository management system.
- The customer will make subject matter experts available for the topics required.
