

Puppet Enterprise Advanced

Stay secure and manage complex infrastructure everywhere with confidence

Puppet Enterprise Advanced is a unified platform for secure infrastructure automation designed to maintain hardened configurations, remediate unauthorized drift, and enforce desired state. Intelligent features and comprehensive functionality empower organizations of all sizes to efficiently navigate a new world reality.

Enforce Desired State at Scale

Puppet configuration management lets you define the desired state of your infrastructure and Puppet automation ensures consistent states across thousands of servers (Windows/Linux).

Rapid, Secure Scaling: Deploy changes quickly and confidently across any infrastructure in all environments.

Automated Compliance: Reduce risk by implementing and continuously enforcing internal and external compliances policies.

Automate Intelligently Anywhere You Operate

Query Infrastructure with Natural Language: Accelerate productivity, eliminate barriers to entry, and make critical infrastructure decisions faster by using natural language prompts to interface with Puppet services and unlock valuable Puppet infrastructure data.

Define Once, Deploy Everywhere: Infrastructure configurations can be written as reusable code and applied automatically — even across complex hybrid cloud estates — eliminating component-specific setups and vendor lock-in.

Extend Automation to the Edge: Puppet's governance and automation capabilities are also available for network and edge devices, like firewalls, routers, and point-of-sale systems. Puppet closes compliance gaps and provides comprehensive visibility across the entire infrastructure estate with a single solution.

Preview Impact of Puppet Code Changes: See the effect of code changes before deployment.

Tear Down Team Silos

Puppet Enterprise Advanced improves collaboration, configuration and risk management efficiency, and reduces tool sprawl.

- Unify server, network, and edge automation within a single platform to streamline workflows and eliminate redundant tools
- Run legacy playbooks without competitive license costs
- Use vulnerability data generated by popular scanning tools to enable swift remediation at scale

Always On Security & Compliance

Puppet Enterprise Advanced provides continuous security and compliance monitoring and enforcement, simplifying audits and ensuring your infrastructure stays secure.

Compliance Assessment and Enforcement

- Scan using the powerful CIS-CAT® Pro Assessor with estate-wide reporting for enhanced visibility
- Simplify audits with comprehensive compliance data and reporting
- Infrastructure automatically remains in perfect harmony with industry security standards, such as CIS Benchmarks

The average age of vulnerabilities is 229 days. Additionally, 60% of breaches are caused by unpatched vulnerabilities.

Configuration Management		
Continuous enforcement of desired state	✓	✓
Centralize, import, and execute existing scripts and processes	✓	✓
Flexible agent-based and agentless architecture with declarative and imperative support	✓	✓
Audit and activity logs, configuration correction reports	✓	✓
Reduce infrastructure risk with patching	(Basic Patching)	(Advanced Patching)
Vulnerability remediation with 3rd party scanner integration (including Nessus)	✗	✓
Productivity & User Experience (UX)		
Intuitive web interface	✓	✓
Unify declarative and imperative workflows in a single platform	✓	✓
Natural language interface to Puppet services and infrastructure data	✗	✓
Access 7000+ ready-to-use modules on Puppet Forge	✓	✓
Flexible user management with role-based access control	✓	✓
Enterprise-Level Support		
World-class technical support	(Standard or Premium)	(Standard or Premium)
SLA for high & critical CVEs on Puppet software	✓	✓
Expert guidance from a dedicated Technical Account Manager	Optional	Optional
Operating Environments		
Manage infrastructure residing on-prem & on popular cloud platforms	✓	✓
Linux, Windows, MacOS agents	✓	✓
Manage Network and Edge devices	Optional	Optional
Enterprise Infrastructure Management		
Out-of-the-box CI/CD pipeline tooling with team workspaces	✓	✓
Predict infrastructure code impact prior to deployment	✗	✓
Quickly integrate with popular tools, such as Grafana, Prometheus, Splunk, and more	✗	✓
Self-Service through integration with ServiceNow	✗	✓
Security & Compliance		
Hardened binaries and packages	✓	✓
Assess infrastructure against CIS Benchmarks	✓	✓
Continuously enforce CIS Benchmarks	✗	✓
