

Audit-Ready Operational Resilience Framework

Evidence by Default. Traceability at Velocity. Accountable Automation.

Use this three-part framework to build audit resiliency and strengthen your readiness for every audit, review, and compliance check.

Principle 1: Evidence By Default

Evidence is a Byproduct of normal operations. Treat evidence as a design requirement.

- What Changed
- Who Approved
- Proof of Enforcement
- Verification of Outcomes

Ask Yourself: If you were asked for audit evidence tomorrow morning, would you be able to produce it confidently, quickly, and consistently?

Principle 2: Traceability At Velocity

Define. Detect. Remediate.

Proactively create decision trail. Make traceability a release condition for automated change

- Event Trigger
- Decision Path
- Actions taken
- Results Tracked

Ask Yourself: Can you quickly reconstruct the decision trail without institutional knowledge?

Principle 3: Accountable Automation

Automation with human oversight. Clarify accountable owners for automated decisions

- Ownership Defined
- Escalation Rules
- Override Controls
- Outcome Accountability

Ask Yourself: When automation changes occur, is accountability clearly defined?
